

Raw-word classification on the 73-angle grid

Sampled presence class

	2-block	3-block	all
no admissible sample	795	1820	2615
admissible at every sample	50	155	205
one contiguous sampled run	105	414	519
multiple sampled runs	0	1	1

Endpoint solve status (reported separately)

	2-block	3-block	all
0: admissible	95	300	395
0: numerically inadmissible	855	2090	2945
0: indeterminate	0	0	0
0: solve failure	0	0	0
$\pi/10$: admissible	110	425	535
$\pi/10$: numerically inadmissible	770	1746	2516
$\pi/10$: indeterminate	70	219	289
$\pi/10$: solve failure	0	0	0

Sampled classes are not claims about exact feasibility intervals or isolated specializations.
